Implementation of the Construction Products Regulation (CPR) (EU) No. 305/2011

Dear Sir or Madam,

as of July 1, 2017 there is a mandatory CE marking requirement according to EU Construction Product Regulation as well as the obligation to issue a Declaration of Performance for, among other things, control and communication cables which are permanently installed in buildings. We have implemented these accordingly and would like to inform you of some important points in this regard:

1. All communication cables marketed under the name TELEGÄRTNER are tested and marked with the classes of reaction to fire according to EN 50575.
2. This concerns communication cables for structured building cabling (copper and fiber optic) as well as coaxial cables.
3. The Declaration of Performance is available to download on our homepage in the Online Catalogue under Product as well as at the following link:

<https://www.telegaertner.com/en/service/downloads/dop/>

It goes without saying that the catalogues, tender texts and data sheets are also updated with the classes of reaction to fire. There is a smooth implementation and delivery of documents.

4. Upon agreement, we will provide our customers with the data necessary for CE marking of bulk goods electronically. Please feel free to contact us! The data provided on our homepage may be used by our customers for printing of labels.

For other communication cables which we trade but are not marketed under the TELEGÄRTNER brand, we would gladly provide the required information upon requests.

Please do not hesitate to contact us for further information.

Yours faithfully,

Michael Kiefer
Head of Sales Department
